

Executive Summary

Project Title

Customer Churn Business Analysis

Business Problem

Customer churn reduces company revenue and affects business growth. Understanding the reasons behind customer churn helps organizations improve customer retention.

Objective

Analyze customer churn data using Python and provide business recommendations.

Methodology

- Data Cleaning
- Exploratory Data Analysis
- Data Visualization
- Correlation Analysis
- Hypothesis Testing
- Regression Analysis

Key Findings

- Customer churn affects revenue.
- Monthly charges influence customer churn.
- Long-term customers are more loyal.

Recommendations

- Improve customer support.
- Offer loyalty rewards.
- Monitor customer satisfaction.
- Provide personalized offers.

Conclusion

The project successfully analyzed customer churn and generated valuable business insights that support data-driven decision-making.
